

## File Tracking Solutions.

# RFID with eTrack Software

## Vital Resource for Financial, Insurance and Legal Offices

Files, folders, records, charts, books, photos, tapes, CDs and DVDs, evidentiary exhibits – in many industries, some form of physical media is central to doing business.

Some physical records, such as legal evidence, financial records or medical charts, must be carefully tracked to meet chain of custody or privacy requirements. Temporarily misplaced assets can be a serious problem, wasting hours of staff time and productivity. Also, in many industries, file and physical record tracking is mandatory and has important regulatory implications.\*

With **eTrack** software from OPI, you can virtually eliminate lost files, audit and fully document access and chain of custody, and improve productivity for every member of your staff who handles critical files.

### eTRACK GETS YOU GOING

A key to RFID is setting up the system – deciding what files should be tagged and what to show on your handheld screens. Here's where **eTrack** software shines, allowing you to quickly customize and collect all your data and integrate it into your existing database.

### TRACKING FILES

In office settings, information is filed, retrieved and moved from location to location as needed. Don't trust your valuable data to normal check-in, check-out systems. RFID with **eTrack** is a quick, easy and virtually foolproof way to know which files are being used and who has them. Here are some other key benefits:

- Physical records are automatically collected and managed.
- Checking-in and checking out files with RFID or barcode scanning automatically updates the status of file holders.
- Records, including files, folders, charts, books, photos, tapes and more, can be retrieved quickly because locations are known.
- Productivity increases when you know where to look. Misplaced assets can be a serious problem, generating worker frustration and wasting hours of staff time.

## HANDHELD CONVENIENCE

The Windows™ mobile-based Motorola handheld reader (MC3190Z) is a central component of OPI's RFID solution. With eTrack software, the handheld user interface is remarkably easy and intuitive, mimicking a cell phone with its touch screen. Point, click and follow the screen instructions.

*The MC3190Z is a business-class handheld RFID reader designed specifically to extend the benefits of RFID beyond industrial spaces and into customer-facing and business environments. It starts with the signature rugged design and high performance that Motorola industrial handhelds are known for, and adds an advanced, high efficiency Motorola RFID reader engine for faster read rates and higher throughput. Add a groundbreaking new orientation-insensitive antenna and the result is a highly versatile device that is at home in customer-facing environments—from retail stores and healthcare facilities to the office.*

## eTRACK P.O.C. BUNDLE

**eTrack** software can be bundled with an assortment of RFID Tags and a Windows Mobile handheld terminal to provide an inexpensive P.O.C. (Proof-of-Concept) tool for the design and testing of your RFID data collection system. All tags included in this bundle are passive Gen 2, Rev 2 compatible, and are selected to offer different read characteristics when applied to various materials such as corrugated, glass, metal or plastics.

## eTrack SEARCH MODE

Another valuable component of OPI's solution is the **eTrack** Search Mode. A single item or group of items and the associated RFID numbers can be selected for a SEARCH when a specific device or part is required. In SEARCH MODE all other RFID tags are ignored while scanning for the required items!

## eTrack TAG FILTERING

This feature will search for a subset of inventory by specifying a required prefix, suffix or common data string. Response time and production will also improve when undesirable or unnecessary tags are filtered out.

## Optical Phusion, Inc. (OPI)

OPI is an enterprise mobility integration company that helps customers manage the entire lifecycle of wireless technology projects with application-based solutions for a range of markets specializing in retail, manufacturing, warehousing, finance, insurance, legal, supply chain and field sales organizations.

### OPI RFID Solutions

The company's RFID tracking solutions include other benefits:

#### Loss Prevention

tracks your assets and can sound alarms at entrances and exits;

#### Lifecycle Management

monitors assets from deployment, software upgrades and departure sites;

#### Employee Productivity

adds RFID tags to employee badges for attendance, emergencies and more.
