

DuraBandID

Patient Wristband Solution

THE PROBLEM

Error-free patient identification is an important step in ensuring patient safety. Hospitals and other health-care facilities require an affordable, easy to use solution to print durable bands that can hold up to wear and remain read-able and scan-able for the length of their stay. Any wristband solution that requires extra steps or time from staff to fit or re-print when, smudged, torn or pulled off can add up to hours of lost productivity and patient care.

THE SOLUTION

Optical Phusion, Inc. (OPI) offers a complete Patient ID solution that includes your choice of Direct Thermal Printer and **DuraBandID Thermal Patient Identification Wristbands**.

This solution enables facilities to quickly and easily print patient information, barcodes and images directly on the wristband surface.

DuraBandID bands are truly **one-size-fits-all**. They can be comfortably fitted on infants, children and adults without any leftover material that needs to be trimmed when applying. The adhesive fitting and closure tabs make applying the wristband easy and efficient. Soft and comfortable on the patient's skin, DuraBandID bands are latex-free and **hypoallergenic**, with no skin-irritating agents or chemical additives.

DuraBandID FEATURES

Quick and Easy to Use

Just enter the information and text, barcodes, and even images print directly on the band for scanning and positive patient identification. The entire surface is printable, making them easy to format, and they're compatible with most thermal printers.

One-Size-Fits-All Comfort

The unique closure means that the one size can fit anyone. The extra-soft bands are hypo-allergenic, with no coatings or components likely to cause allergic reactions or skin irritation.

Secure and Durable

Durable enough to hold up to water, soap, and alcohol-based sanitizers without fading or smearing. They don't tear off easily, and the closure tab offers tamper-evident protection for added security.

Color Bands Available

Same quality wristband is available in non-printable, color versions for visible identification alerts such as Allergy, DNR, Fall Risk and others.
